

Ireland's only 5 star grazing mixture with Aspect and Xenon

- Mixture based on DLF's NxGen Tetraploids
- Xenon and Nashota, in particular, carry the density of diploids
- Xenon and Aspect are the top two varieties in Teagasc grazing trials
- All varieties are late heading for extended sward quality

DLF's 4N Grazer includes Aspect and Xenon which both have the yield and quality of Tetraploids combined with the density of most Diploids.

A unique all-Tetraploid mixture for excellent quality and graze-out.

4N Grazer provides high grazing yields, low grazing residuals and excellent persistence.

DLF 4N GRAZER		
CUT AND GRAZE		
55%	Nashota	(T) Late perennial Ryegrass
20%	Aspect	(T) Late perennial Ryegrass
20%	Xenon	(T) Late perennial ryegrass
5%	Dual purpose Clover	White clover blend
